## Freelancing Projects

<b>Legal Linda</b> <a href="https://legallinda.com/">https://legallinda.com/</a>	Developed and still maintaining a chatbot service powered with machine learning working on a website chat widget to help law firm collect new leads and help them book appointments directly through chat into the law firm business calendar.
---	--

<b>F6S to Airtable ETL service</b>	I have built an ETL web service to keep the data synced in a one way between F6S venture capital management platform and an Airtable base, the final delivery was a cron job that runs frequently to get, manipulate and finally move the data to the base.
<b>Financial and Legal Consultancy Messenger Chatbot</b>	Developed and still maintaining a financial and legal consultancy chatbot for a firm in Singapore, the bot is providing consultancy, offering products like online dynamically generated legal documents on the go through simple screening in the bot and online payment without the need of a visit to an actual attorney.
<b>Overdrive to Airtable ETL service</b>	I have built and ETL web service to offer two ways data synced between the client Electronic library on Overdrive and his base on Airtable to ease the management of borrowing books to his students to encourage them to read more. The final delivery was a cron job that runs to sync data in both directions, build historical records on all the book borrowed, and also the ability to simply assign book to a student from inside Airtable that immediately reflect on Overdrive system in the student account.
<b>Anti-Bullying Android Keyboard</b>	An android keyboard application built based on Any Soft open source keyboard then trained with a google ML platform and integrated with a Firebase Realtime Database to allow Bullying phrases detection in order to suggest less harmful ways of communication.
<b>Chatbot Webinar Registration System</b>	I have built a messenger chatbot with an integration to the everwebinar evergreen webinar platform, that included registrations from inside the messenger window, as well as reminders when the webinar was about to start.
<b>Messenger Restaurant Orders Chatbot</b>	A Facebook messenger chatbot to enable restaurant's customers to manage their orders (adding, removing and viewing order summary) through the messenger platform., then passing all information to the managements.

**Projects: (Links to these projects are present at [www.amjadmaged.com/#portfolio](http://www.amjadmaged.com/#portfolio) )**

<b>Gesture Based Notice Board</b>	A notice board application that can be controlled by hand gestures. It was developed to replace the conventional paper-based notice board and was installed at The Department of Computer Science and Engineering, UET Lahore.
<b>UETMappy - Android App</b>	An android application developed for fresh students of UET Lahore to guide and help them discovering the campus of the university.
<b>CGPA Calculator</b>	A dynamic online application built to help the students calculating and experimenting with their CGPAs.
<b>TODO List App</b>	A local TODO list web application developed to help a person maintaining daily tasks locally on his/her own machine.
<b>Weather App</b>	A web application to show the weather for a specific area using a web API.
<b>Random Quote Generator</b>	A web application developed to retrieve random quotes from an API to display for the user.
<b>Lexical and Syntax Analyzer for Pascal Language</b>	A semester project to check a plain source code written in pascal and verify its validity according to the language rules and syntax.
